

Getting Started

Bugslayer 4.0 currently fixes two problems in Fusion 4.0:

- [Targeting Shortcut](#)
- [Do not Publish/Text Links error](#)

BugSlayer is a 'post publish' component. It does not appear on the coolmaps.com component bar in Page view. BugSlayer is enabled in Publish View.

- Choose Publish View > Set Up > Components

Targeting Shortcut

THE FUSION 2. / 3.* TARGET SHORTCUT*

A popular shortcut to adding targets to links in Fusion 2 and 3 was to add the target in the external link field, but leaving it 'open' so Fusion would complete the statement.

The resulting published code was:

```
<A HREF="http://coolmaps.com" Target="_blank">
```

This was a much quicker way to add targets compared to using Object Html > Inside Tag etc.

THE FUSION 4.0 PROBLEM

Attempting to use the target shortcut in 4.0 results in the following code:

```
<A HREF="http://coolmaps.com' Target='_blank">
```

The code is now broken :-(

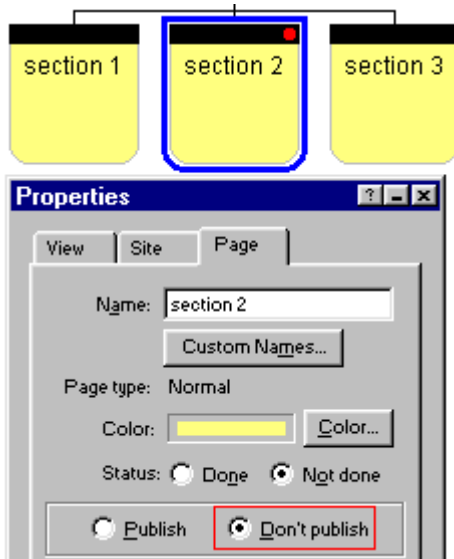

THE BUGSLAYER SOLUTION

BugSlayer is a Post Publish Component that when activated checks for the target shortcut error and corrects it!

```
<A HREF="http://coolmaps.com" Target="_blank">
```

Do Not Publish Error

When a page is set to 'Don't Publish' in Fusion 4.0 the page itself is not published, but a link to it appears in the auto generated text navigation at the bottom of each page.

Resulting Navigation bar:

The BugSlayer Solution:

Bugslayer checks for any incidence of 'Don't Publish' and removes the offending link. :-)
