

Confirmer 5.0

Getting Started

Confirmer is a small component that allows you to create javascript alert boxes quickly and easily, that either greets the site visitor or confirms whether or not they would like to proceed.

- Run the Installation program, specifying the location of Fusion 4.0/5.0's component directory.
- Launch Fusion
- If the coolmaps.com component toolbar is not visible choose View > Toolbars > Component Tools > coolmaps.com components
- Select the Confirmer component and drag out an area on the page (this graphic does not appear on the published page).

The Confirmer properties now appears in Fusion's properties palette.

About the Options

Confirmer popups appear as a page is loaded. If the 'Alert' option is selected the user only needs to click ok to proceed - the Alert is primarily informative.

When 'Confirm' is selected the user must click OK to access the page, or cancel to return to the previous page.

Confirmer now allows multiple lines of text. Enter the number of lines you require, and the text fields will become available.
